"A Toolkit for Resisting Algorithmic Empire: How Communities Can Fight Back Against Biometric and Predictive Surveillance"

This hits the assignment brief perfectly — it's anti-imperial, it's technology-specific, and it draws directly on your GEOG 258 work, your Beijing AR lab experience, and SkinGraph's dataset bias angle. It also mirrors the AI Now format naturally: a real problem, real issue areas, real interventions.

HTML Website Structure

Hero Section — Cover + Framing Statement

Title, your name, one-sentence thesis. Something like: *"Surveillance technologies are not neutral tools — they encode imperial logics of control, extraction, and racial classification. This toolkit maps how communities can refuse them."*

Opening — The Problem: What Is an Algorithmic Empire? Define the concept. Draw on Ruha Benjamin, Virginia Eubanks, your GEOG 258 readings. Connect facial recognition, predictive policing, and biometric databases to historical imperial practices of categorization and control.

Question— Who Gets Watched? (The Stakes) A map or visual showing who surveillance technology disproportionately targets — by race, immigration status, geography. This is where your Beijing AR lab experience can appear as a case study.

Issue Areas (toggle list, once click expand, mirroring AI Now's structure)

Each with: What it is → Why it matters → What you can do

- Biometric Data Collection — refuse facial recognition at airports, stadiums, schools
- Predictive Policing Algorithms — community demands for algorithmic audits
- Dataset Bias & Training Data — how biased datasets perpetuate harm (SkinGraph case)
- Cross-Border Data Flows — who owns your data when you live between states/nations
- Institutional Adoption — how to pressure universities, employers, landlords to reject surveillance tech

What can we do — Tactics Rated by Strength A table or visual rating tactics from "easiest individual action" to "strongest collective intervention" — mirroring AI Now's North Star / Strong / Weak rating system.

Resources + Call to Action Key orgs (AI Now, Algorithmic Justice League, Stop LAPD Spying), further reading, and one concrete next step the reader can take this week.
